

Aark TDIF

TASCAM™ TDIF AUDIO CARD 8 Channel Digital Interface for PC

The Aark TDIF PCI card gives you the power to connect your PC directly to your DA-88 so you can fly in all 8 tracks at once, all using the proprietary digital format.

Feel free to dump all these tracks directly from the DA-88 and right into the hard drive, then do all your editing right there on the computer. Easy to record, easy to edit and best of all you can do all eight digital tracks at once. The full duplex mode lets you record and playback all 8 channels, giving you the ultimate flexibility in how you want to do hard disk recording.

The Aark TDIF is a powerful catalyst that allows you to work faster, easier and smarter than you could before. Keep it digital with the popular TDIF format and take it directly into your PC.

Connects directly to:

-  TASCAM 'DA-88™'
-  TASCAM 'DA-98™'
